YEARS STRONG

1886-2021

135 years of keeping manufacturers up and running!

Dating back to 1886, Cullum & Brown started as a small family-owned water well drilling business serving the Kansas City area. Today, we are your ultimate source for service and new sales of compressors, blowers, vacuum, and pumps, serving Missouri and Kansas with 37 and counting employees. From installation to world-class service, our goal is to keep you up & running!

We are your ultimate source for Compressors, Blowers, Pumps and Vacuum!

- Largest compressor rental fleet in the area!
- Servicing all brands and MFGs
- Preventative Maintenance Programs
- Turnkey Installation- Pipe, Electrical, Mechanical
- Complete Compressed air system audits- Save energy!

2020 AND COUNTING

Increase efficiency and reduce waste with digital leak detection:

Compressed air systems that aren't leak-tight waste large amounts of costly energy. And, because compressors need to compensate for compressed air leaks, this means more wear and tear on your equipment, increasing operating costs. You can't afford to lose large amounts of costly compressed air. And you certainly don't want higher than necessary operating costs impacting the bottom line. We understand this. So, we are proud to now offer state-of-the-art digital leak detection.

Using Sonotec's Sonophone Digital Leak detection equipment, we'll locate leaks in your compressed air system, evaluate the amount of compressed air and energy lost then document the information in an easy-to-understand report including pictures of the leak and location along with a rating scale so you can understand which leak is impacting your system the most. Because of the outstanding sensitivity of our devices, we'll be able to detect leaks in even the most challenging and loud environments so there will be no disruption to your business.

As experts in the design and service of compressed air systems, we'll then be able to determine and perform the repairs that will protect your compressed air system from energy loss.

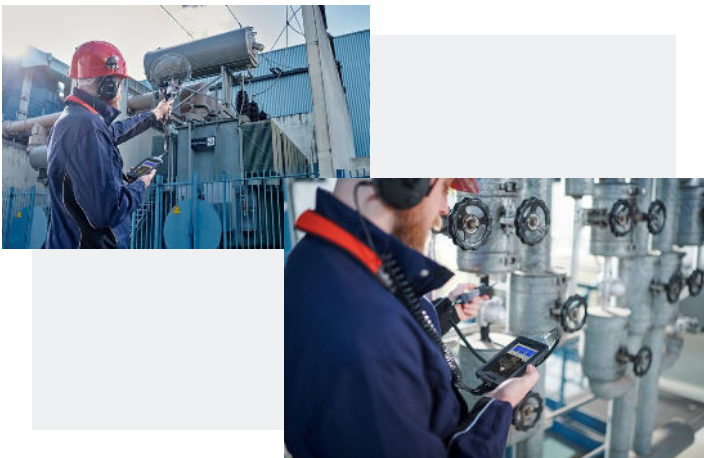

Why invest in digital leak detection?

Decrease your operating costs

Ensure longevity of your compressed air system

Increase efficiency

Reduce energy consumption
